(54) DEVICE FOR MANUFACTURING ELECTROPHORETIC DISPLAY DEVICE

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a device for manufacturing an electrophoretic display device of high quality in which electrified migration particles in the dispersion liquid can be easily and uniformly distributed in each display device even when the gap between two substrates is very small or even when flexible substrates or the like are used.

SOLUTION: The device is used for the manufacturing an electrophoretic display device having at least electrified migration particles, a dispersion medium in which the electrified migration particles are dispersed, and substrates having electrodes. The device for the manufacture of the electrophoretic display device is equipped with a reserving means 14 to reserve a dispersion liquid 13 in which electrified migration particles 12 are dispersed, a means 17 to stir the dispersion liquid, a substrate holding means 19 to hold a substrate 18 in the dispersion liquid, and means 110 to apply a voltage on the electrode formed on the substrate to deposit the electrified migration particles on the electrode.
